

DeliverHealth

eSOne InQuiry Release Notes

What's New?

DeliverHealth is pleased to announce enhancements to the InQuiry search and filter experience and additional bug fixes.

Search and Filter Enhancements

- The Document Type selection list in Advanced Search (in Search All tabs) and Advanced Filters (workflow folders) has been updated to display the short document type name, followed by a dash, then the document description.
- The Clear button in Advanced Search (in Search All tabs) will clear the entered search criteria, but not the search results. This allows for new criteria to be submitted for new search results without waiting for Advanced Search to refresh first.
- Data will be refreshed in the workflow folders when a filter is applied to ensure new reports added to the folder are included if filter criteria are met.
- Advanced Search and Advanced Filters have been updated to jump to the next field, in the order in which they appear, when pressing Tab.

Bug Fixes

- Resolved bug causing error message “Changes you made may not be saved” to appear when changes were not made.
- Resolved bug causing message “Object moved to here” after the InQuiry session expired.

Minimum Application Requirements

- Operating system: Windows 10
- Web Browser: Chrome, Edge, Firefox
- RAM: 1 GB or higher
- Processor: 1 GHz or faster (32 or 64-bit Architecture)
- Hard Drive Free Space: 1 GB or higher
