eSOne InQuiry
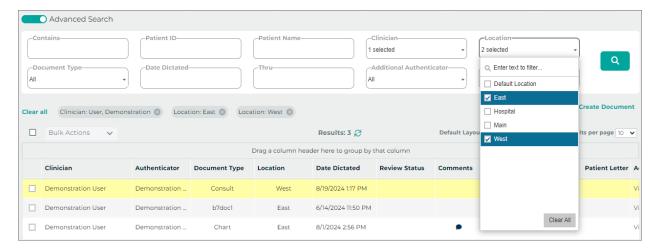

Workflow Folders Advanced Search Enhancements

Release Notes

What's New?

DeliverHealth is pleased to announce the latest updates and enhancements to eSOne InQuiry. This release includes key improvements in the search functionality within workflow folders, providing users with greater control and precision in managing their data.

Key Features and Enhancements:

New Fields Added to Advanced Search with Multiselect List Box

Two new fields have been added to the Advanced Search within workflow folders, both equipped with multiselect list boxes, enhancing users' ability to perform broader and more detailed searches:

- Additional Authenticator: Users can now search across multiple additional authenticators in a single query.
- Comment Tags: Users can filter documents based on specific comment tags for more targeted results.

Multiselect Functionality in Advanced Search

We've added multiselect capability to all selection list fields in Advanced Search within workflow folders, allowing users to select multiple values simultaneously, improving the flexibility of search queries:

- Location
- Clinician
- Document Type
- Comment Tags
- Additional Authenticator

DeliverHealth

Improved Filtering Behavior in Workflow Folders

Advanced Search filters have been enhanced to provide exact matches rather than partial matches. When a user selects a value from the Advanced Filters (e.g., Location, Clinician, Document Type), the grid will now filter data to display only the selected value. This ensures more accurate and specific results by avoiding the previous "contains" behavior.

We are confident these new features and enhancements will improve your experience with eSOne InQuiry, providing better search flexibility and accuracy in managing your workflow.

Minimum Application Requirements

– Operating system: Windows 10

– Web Browser: Chrome, Edge, Firefox

– RAM: 1 GB or higher

– Processor: 1 GHz or faster (32 or 64-bit Architecture)

– Hard Drive Free Space: 1 GB or higher

What's Next?

The following updates will be available in the coming weeks:

- Most enhancements made to Advanced Search within the workflow folders will be added to Search All, including the collapsable Advanced Search panel.
- Pagination will be replaced with infinite scrolling in the data grids.
- Sticky columns will be introduced, allowing specific columns to always appear in the grid regardless of the grid size and scrolling.

Reminder

The option to revert to classic InQuiry will be removed September 30, 2024. Only modern InQuiry will be available to users.
