

DeliverHealth

eScript One Mobile for Android v3.0.2.1

Release Notes

What's new?

DeliverHealth is pleased to announce the release of eScription One Mobile for Android v3.0.2.1. This release includes the following bug fixes.

Solved Issues

- Fixed an issue with switching to a linked account that requires a password.
- Fixed an issue with appointment data only appearing in the application on new dictations created from transcriptions.

Application Requirements

- eScription One Mobile for Android requires an Android operating system that still receives security updates from Android. As of 1/1/2022, version 8 or higher of the Android operating system is required. Open 'Settings' and tap 'About Phone' then 'Software Information' to confirm that the 'Android Version' or 'Firmware Version' listed is 8 or higher.
- Internet Access through a wireless Local Area Network (LAN) connection or through a phone service provider. It is strongly recommended to use a Wi-Fi LAN connection when uploading dictations. Minimum bandwidth: LTE/4G data connection; recommended is stable Wi-Fi with 3 Mbps download/1 Mbps upload or greater.
- A microphone for dictating is needed.
- Communicates over port 443 to <https://mobile.escription-one.com> using TLS 1.2.
