eScription One Mobile
for Android v3.4.1
Release Notes

What's new?

DeliverHealth is pleased to announce the release of eScription One Mobile for Android v3.4.1. This release includes a fix to prevent mobile devices from locking during dictation recording and playback if the screen is not touched within the set screen lock time. This update also prevents the app from crashing on devices without a proximity sensor, such as tablets.

Several other minor bug fixes are included as well.

Application Requirements

– eScription One Mobile for Android requires an Android operating system that still receives security updates from Android. As of 6/27/2022, version 10 or higher of the Android operating system is required. Open 'Settings' and tap 'About Phone' then 'Software Information' to confirm that the 'Android Version' or 'Firmware Version' listed is 10 or higher.

– Internet Access through a wireless Local Area Network (LAN) connection or through a phone service provider. It is strongly recommended to use a Wi-Fi LAN connection when uploading dictations. Minimum bandwidth: LTE/4G data connection; recommended is stable Wi-Fi with 3 Mbps download/1 Mbps upload or greater.

– A microphone for dictating is needed.

– Communicates over port 443 to https://mobile.escription-one.com using TLS 1.2.
